

- RNA splicing
- DNA damage response
- chromatin organization
- mitochondrial DNA replication
- response to hormone
- ameboidal-type cell migration
- positive regulation of DNA metabolic process
- cellular response to interleukin-6
- methylation
- regulation of cell cycle process
- ncRNA metabolic process
- response to steroid hormone
- substrate-dependent cell migration
- base-excision repair
- regulation of miRNA-mediated gene silencing
- tRNA transcription by RNA polymerase III
- negative regulation of cold-induced thermogenesis
- regulation of behavior
- apoptotic signaling pathway
- heart development
