

- gliogenesis
- small molecule catabolic process
- myeloid leukocyte activation
- small molecule biosynthetic process
- cell activation
- monocarboxylic acid metabolic process
- negative regulation of immune system process
- response to wounding
- negative regulation of cell population proliferation
- response to toxic substance
- regulation of secretion
- enzyme-linked receptor protein signaling pathway
- positive regulation of response to external stimulus
- import into cell
- sensory organ development
- renal system development
- actin filament-based process
- cellular response to metal ion
- positive regulation of cell migration
- tube morphogenesis
