

- synaptic signaling
- potassium ion transmembrane transport
- regulation of establishment of protein localization
- regulation of dendritic spine morphogenesis
- regulation of system process
- synapse organization
- regulation of monoatomic ion transmembrane transport
- positive regulation of relaxation of muscle
- positive regulation of protein localization to membrane
- negative regulation of cell differentiation
- central nervous system neuron differentiation
- regulation of membrane potential
- collagen biosynthetic process
- modulation of chemical synaptic transmission
- response to salt
- cell morphogenesis
- regulation of muscle adaptation
- intracellular receptor signaling pathway
- protein C-linked glycosylation
- regulation of receptor signaling pathway via JAK-STAT
