

- regulation of cellular response to stress
- protein modification by small protein conjugation
- dentate gyrus development
- endomembrane system organization
- regulation of cholesterol biosynthetic process
- microtubule-based movement
- regulation of small molecule metabolic process
- cell-cell adhesion via plasma-membrane adhesion m
- endothelial cell differentiation
- regulation of protein glycosylation
- regulation of neuron projection development
- cell morphogenesis
- organelle disassembly
- DNA damage response
- glycerolipid biosynthetic process
- negative regulation of phosphorylation
- keratan sulfate metabolic process
- positive regulation of protein localization
- cellular homeostasis
- response to radiation
