

- sterol biosynthetic process
- small molecule biosynthetic process
- small molecule catabolic process
- response to toxic substance
- leukocyte activation
- regulation of secretion
- actin filament-based process
- monocarboxylic acid metabolic process
- negative regulation of cell development
- neuron projection development
- cellular response to zinc ion
- negative regulation of cell population proliferation
- cellular response to metal ion
- import into cell
- myeloid leukocyte activation
- regulation of hormone levels
- tube morphogenesis
- head development
- negative regulation of immune system process
- positive regulation of cell adhesion
