

- membrane organization
- endocytosis
- mRNA metabolic process
- metal ion transport
- organelle fusion
- amide biosynthetic process
- ncRNA metabolic process
- regulation of vesicle-mediated transport
- chromatin organization
- cellular response to steroid hormone stimulus
- response to hormone
- phosphorylation
- regulation of cellular response to stress
- head development
- negative regulation of intracellular signal transduction
- protein localization to organelle
- lipid localization
- sulfur compound biosynthetic process
- actin filament-based process
- cerebellum development
