

- cytoplasmic translation
- ribonucleoprotein complex biogenesis
- mitochondrion organization
- nucleobase-containing small molecule metabolic pro
- regulation of establishment of protein localization
- modification-dependent macromolecule catabolic prc
- intracellular protein transport
- localization within membrane
- regulation of protein stability
- ribosome biogenesis
- negative regulation of cellular component organizatic
- nucleobase-containing compound catabolic process
- actin filament-based process
- regulation of vesicle-mediated transport
- positive regulation of protein modification process
- establishment of organelle localization
- regulation of protein catabolic process
- regulation of binding
- negative regulation of cell population proliferation
- regulation of DNA metabolic process
