

- mitochondrion organization
- generation of precursor metabolites and energy
- mitochondrial transport
- organelle localization
- membrane organization
- establishment of chromosome localization
- vesicle-mediated transport in synapse
- ubiquitin-dependent protein catabolic process
- positive regulation of organelle organization
- synaptic signaling
- microtubule-based movement
- regulation of autophagy
- neuron projection development
- mitochondrial membrane organization
- negative regulation of protein modification process
- cytochrome complex assembly
- response to nutrient levels
- cellular response to salt
- proton transmembrane transport
- hepatocyte apoptotic process
