

- protein localization to membrane
- regulation of secretion by cell
- synaptic signaling
- mitochondrion organization
- cytoplasmic translation
- protein localization to cell periphery
- regeneration
- regulation of catecholamine secretion
- negative regulation of cellular component organization
- embryonic skeletal system development
- mast cell mediated immunity
- actin filament-based process
- action potential
- mitotic cell cycle
- adenylate cyclase-inhibiting G protein-coupled receptor
- regulation of cell-cell adhesion
- sensory organ development
- trabecula formation
- positive regulation of mitotic cell cycle
- fatty acid catabolic process
