

- inorganic ion transmembrane transport
- synaptic signaling
- phosphorylation
- regulation of secretion by cell
- modulation of chemical synaptic transmission
- regulation of transmembrane transport
- regulation of membrane potential
- response to salt
- regulation of neuron projection development
- head development
- synapse organization
- regulation of circadian rhythm
- behavior
- regulation of system process
- regulation of neurotransmitter secretion
- response to xenobiotic stimulus
- skeletal system development
- regulation of dendrite development
- positive regulation of post-translational protein modifi
- regulation of small GTPase mediated signal transduc
